

NEW REPAIR & SYSTEM TEST CAPABILITY

Indramat DSC3.1 Servo Drive System

Technical Bulletin

K+S Services Kokomo facility has recently acquired a servo control test and diagnostic center for the Indramat DSC 3.1 servo system. The system consists of an Indramat TRANS01 controller, DSC3.1 servo drive, MAC series AC servo motors and a special diagnostic fixture designed to interface to all the TRANS01 / DSC communication and control ports. This system provides a totally configurable, closed loop environment to run test each of these components in simulated real world applications. The Indramat DSC series servo control system is used in many machining applications and are sealed and filtered for operation in areas with poor working environments!

12 Month In-Service Warranty

All Units Are System Tested

No Charge Evaluation
